ISDS 3107
**Assignment 1: Build & Host a Static Website**
Due: 15 September 2020

Description
The goal of this assignment is to build a fully functioning static website using GitHub Pages.

You can learn more about GitHub Pages here: https://pages.github.com/
An example for building & hosting a static website (for free) can be reviewed in Ch. 3 of the e-book
located here: https://www.softcover.io/read/92780ad5/python_book/static_website

Requirements
Full completion of this assignment will require obtaining accounts with **GitHub**, **CloudFlare**, and a
domain registration service, such as **GoDaddy**. GitHub & CloudFlare operate on the freemium model
and should not create any utilization charges. GoDaddy will require payment for registering a domain.
Savvy students can usually find discount codes or other reduced pricing. You are welcome to use a
domain you already own. If registering a new domain, pick something you would want to reuse
someday (i.e. ravens-rockin-design.com).

Grading
- Created GitHub repository - 20 pts
- Added 'cavalryjim' as a collaborator to your GitHub repository – 20 pts
- https://username.github.io returns an html page – 20 pts (note: 'username' refers to your GitHub
  username). Send link to Dr. Davis via Slack.
- Utilized Zurb Foundation template – 20 pts
- Customize template in some manner – 10 pts
- Registered custom domain name & route traffic through CloudFlare – 10 pts
